

Skills

- Data Management & Querying (SQL)
 - Statistical Analysis & Modelling (Python, R)
 - Data Visualization & Storytelling (Tableau, Power BI)
- Data Engineering & Pipelines (Excel Power Query, GitHub Actions, Google BigQuery)
 - Reproducible Reporting (Word, Quarto)

Projects

HOW THE COST OF FOOD HAS CHANGED IN KENYA – Personal Project – Kisumu, Kenya, KE Jun 2025

- Built a household essentials basket (maize flour, sugar, cooking oil, milk, sukuma wiki, tomatoes, onions) using WFP market price data.
- Found overall basket costs rose **5% YoY** — from **KSh884 (June 2024)** to **KSh928 (June 2025)**.
- Identified key drivers: **tomatoes +25% (KSh19 rise)**, **cooking oil +14% (KSh35 rise)**, and **sugar +13% (KSh19 rise)** — together adding **KSh73** to the basket.
- Highlighted partial relief from onions, which fell **–37% (–KSh45)**, slightly offsetting household food inflation.
- **Result:** Household food inflation persists despite isolated price drops, leaving families with higher overall costs.

HOW KENYAN HOUSEHOLDS CAN CUT MAIZE FLOUR COSTS – Personal Project – Kisumu, Kenya, KE Aug 2025

- Cleaned and analyzed 10 years of dry maize vs. maize flour price data using SQL, Python, and R to test if milling saves money.
- Found milling dry maize (**KSh130/2kg**) saves households **KSh40 per 2kg** compared to buying packaged flour (**KSh170/2kg**), if milling losses are ignored.
- Showed that with **25% milling losses**, the effective cost rises to **KSh174/2kg**, making packaged flour cheaper at retail.
- Confirmed differences with Wilcoxon tests; cost gap of **KSh5 per 2kg** was statistically significant though effect size was modest.
- **Outcome:** While milling can cut costs, savings quickly disappear once milling inefficiencies are factored in.

Work Experience

DATA ANALYST INTERN – Excelerate – Remote Jan 2025 – Feb 2025

- Completed a 4-week virtual internship analyzing student engagement datasets to uncover trends and behavioral patterns using **Python, SQL**, and machine learning workflows.
- Performed data preprocessing, EDA, and built predictive models to identify factors driving sign-ups, completions, and drop-offs; generated actionable insights through clear visualizations and reports.
- Recognized as a **Star Performer** for outstanding analytical work and solution-oriented insights.

DATA ANALYST ATTACHEE – KEMRI-CGHR – Kisumu, Kenya, KE May 2024 – Aug 2024

- Managed and maintained data using **Microsoft SQL Server**, ensuring data integrity and efficiency.
- Conducted statistical analysis utilizing **Python, R** and **Stata**, deriving insights to support research and operational decisions.
- Developed comprehensive data reports and visualizations using **Quarto**, effectively communicating key findings to stakeholders.
- Collaborated with a cross-functional team to streamline data workflows, improving organization’s reporting processes.

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE – Moi University – Eldoret, Kenya, KE Dec 2025

Major: Data Analytics

Referees
